

**Bromportrait** black-and-white photographic papers for general purpose are designed to obtain prints in artistic and hobby photography by contact and projection printing.

### Characteristics

Photographic papers are manufactured of the following kinds:

- smooth and embossed - depending on the structure of the surface;
- glossy and matt - depending on the character of the surface;
- single-weight and double-weight - depending on the mass of the paper base;
- semi-soft, normal and contrast - depending on the index of useful exposure latitude.

**Bromportrait** photographic paper is manufactured on baryta base (Bromportrait 80 BP).

### Sensitometric indices of Bromportrait photographic paper

| Type of photographic Paper                                       | Contrast  | Value of indices of photographic papers |                                      |   |                 |
|--|-----------|---|--------------------------------------|---|-----------------|
|  |           | Speed to ISO 6846                       | Useful exposure latitude to ISO 6846 | Maximum Density, $D_{max}$ , B, not less than |                 |
|  |           |   | Smooth glossy, Embossed glossy       | Smooth glossy                                 | Embossed glossy |
| <b>Bromportrait 80 BP</b><br>double-weight FB-paper<br>warm tone | Semi-soft | P40-P125                                | R100-R110                            | 1,90  | 1,60            |
|  | Normal    | P40-P125                                | R80-R90                              | 1,90  | 1,60            |

Chemical-photographic processing conditions of the paper:

Development: CT-1 and etc. – 2 min

Fixing: BKF and etc. – 10-15 min

Processing temperature: 20 °C

The photographic paper can be delivered together with the complete set of the photochemicals.

Bromportrait black-and-white photographic papers are manufactured in standard sheets of 13x18, 18x24, 24x30, 30x40, 50x60mm sizes and in rolls.

Package: 25, 50, 100 sheets per a box.

On agreement with customers it is possible to manufacture photographic papers of other sizes.
